

Introduction to AI

September 21, 2023

Dennis Kennedy

This presentation will help forward-thinking lawyers and legal professionals understand artificial intelligence(s), its (their) legal implications, and how AI will impact the law and the practice of law.

Agenda

- Ethical Framework
- My History in AI
- AI: Historical Perspective
- Some Useful Frameworks
- What's Changed Now with Generative AI and LLMs
- Teaching AI and Law
- My Own AI Experiments
- The Current Legal AI Landscape
- Setting up the Rest of the Day
- Conclusions and Action Steps
- Q &A

Competence and Confidentiality

RULE 4-1.1: COMPETENCE

A lawyer shall provide competent representation to a client. Competent representation requires the legal knowledge, skill, thoroughness and preparation reasonably necessary for the representation.

Maintaining Competence

[8] To maintain the requisite knowledge and skill, a lawyer should keep abreast of changes in the law and its practice, including the benefits and risks associated with relevant technology, engage in continuing study and education and comply with all continuing legal education requirements to which the lawyer is subject [emphasis added].

"Artificial Intelligence is a means of designing a system that can perceive its environment and take actions that will maximize its success." -Tom Mighell

Developments in Big Data, machine learning, IBM Watson, and other advancements in technology have brought back the cyclical discussion of what artificial intelligence might mean for lawyers. Has anything really changed, or have we just reached another round of the AI debate?

In this episode of *The Kennedy-Mighell Report*, Dennis Kennedy and Tom Mighell analyze

BROUGHT TO YOU BY

EPISODE DETAILS

Assessing the Current AI Landscape for the Legal Sector

Dennis Kennedy

London Legal AI Forum, 2017

<input type="checkbox"/>	3	<u>Artificial Intelligence & Law</u> ▲ / <u>Kennedy, Den.</u>	537R / 001	34237	MW/10:30am-11:45am	20	344	Final Paper,
--------------------------	---	---	------------	-------	--------------------	----	-----	--------------

Artificial Intelligence is experiencing a “golden age” of rapid development. As the use of AI increases, people and computers are knowingly and unknowingly interacting in new ways. Lawyers are confronting computer issues in every practice area. Smart contracts. Autonomous vehicles. Creation and ownership of property. Robot policing and warfare. Interconnected products. Autonomous devices. AI requires updated and new regulations, new ways of practicing, and an understanding of how laws and code interact as a new regulatory system within society. This class will look at how computers are affecting the law and what lawyers should know to provide legal services in this hybrid world.

- . . . - - - - - - - / - - - -

Let's Go to the Wikipedia

Artificial intelligence (AI, also machine intelligence, MI) is apparently [intelligent](#) behaviour by [machines](#), rather than the *natural intelligence (NI)* of humans and other animals.

Artificial intelligence (AI,
also machine intelligence, MI) is
apparently intelligent behaviour
by machines, rather than
the *natural intelligence* (NI) of
humans and other animals.

A deep learning model trained on 85,000 eyes
can tell male from female eyeballs with 87%
accuracy but no one knows why

[nature.com/articles/s4159...](https://www.nature.com/articles/s41598-020-19159-0)

In 2017, generally accepted AI includes:

- Understanding human speech
- Competing at a high level in strategic game systems
- Autonomous cars
- Intelligent routing in content delivery networks
- Military simulations
- Interpreting complex data

THE 70-YEAR (OR 700-YEAR)

OVERNIGHT SUCCESS OF AI

1300: Ramon Llull tries to build reasoning machine

1943: McCulloch and Pitts - “Artificial Neurons”

1956: Birth of AI Research – Dartmouth

1960s: The “Great AI Optimism”

1967 – Marvin Minsky

“[W]ithin a generation ... the problem of creating 'artificial intelligence' will substantially be solved.”

1982 – Marvin Minsky

“The AI problem is one of the hardest science has ever undertaken.”

THE 70-YEAR OVERNIGHT SUCCESS

THE AI WINTERS

THE 70-YEAR OVERNIGHT SUCCESS

Bottom up vs. top down, fuzzy
logic, neural networks and
machine learning, now LLMs and
generative AI, specialized
computer chips

In 2023, artificial intelligence (AI) has become embedded in every aspect of our society and lives. Here are some major examples:

1. **Chatbots and Virtual Assistants:** AI has been used to create chatbots and virtual assistants like Siri and Alexa ¹.
2. **Automated Industrial Machinery:** AI is being used to automate processes in industries ¹.
3. **Self-Driving Cars:** AI is being used in the development of self-driving cars ^{1 2}.
4. **Healthcare Management:** AI is being used in healthcare management ².
5. **Automated Financial Investing:** AI is being used in automated financial investing ².
6. **Virtual Travel Booking Agent:** AI is being used in virtual travel booking ².
7. **Social Media Monitoring:** AI is being used in social media monitoring ².
8. **Manufacturing Robots:** AI is being used in manufacturing robots ².

Current and Future Use Cases

What would you,
right now, be
comfortable with
using generative AI
for in law practice?

How will your
answer change by
the end of the day?

Generative artificial intelligence (also generative AI or GenAI^[1]) is artificial intelligence capable of generating text, images, or other media, using generative models.^{[2][3][4]} Generative AI models learn the patterns and structure of their input training data and then generate new data that has similar characteristics.^{[5][6]}

In the early 2020s, advances in transformer-based deep neural networks enabled a number of generative AI systems notable for accepting natural language prompts as input. These include large language model chatbots such as ChatGPT, Bing Chat, Bard, and LLaMA, and text-to-image artificial intelligence art systems such as Stable Diffusion, Midjourney, and DALL-E.^{[7][8][9]}

Interest over time ⓘ

Dator's Method:

1. **Continued Growth - "Augmented Advocacy":** The future sees a linear growth in the application of AI. Law firms incorporate AI as supportive tools that enhance human capabilities. This future is characterized by smarter tools and more efficient law practices but remains recognizably close to our current state.
2. **Collapse - "Lost Faith in Algorithms":** Over-reliance or a major failure in a high-profile legal case causes the legal profession to retract its adoption of AI. Law firms return to more traditional practices, and the tech bubble surrounding legal AI bursts due to dwindling trust.
3. **Discipline - "Strictly Regulated AI":** Major controversies lead to stringent regulations on how and when AI can be used in the legal profession. There's a balance between human and machine, but every AI application has strict oversight and operates within narrow boundaries.
4. **Transformation - "AI Judiciary":** A revolutionary change in how we view the legal system. AI doesn't just assist lawyers; it becomes an integral part of the judiciary. Courts and law firms operate on AI-driven consensus models, changing the very nature of how justice is perceived and delivered.

Uncertainties:

1. **Scale of AI Automation** (From Task-specific to Whole-process)
2. **Human vs. AI Success Rate** (From Humans Superior to AI Superior)

	Task-specific Automation	Whole-process Automation
Humans Superior	<i>Analog Advocates</i>	<i>Humans Overseeing Machines</i>
AI Superior	<i>Digital Assistants</i>	<i>Silicon Solicitors</i>

1. **Analog Advocates:** AI is used only for specific tasks, and humans are perceived as more accurate and effective. The legal profession remains mostly traditional with AI as a minor tool.
2. **Digital Assistants:** While AI is used only for specific tasks, it outperforms humans in those areas. Lawyers focus on tasks where human touch and judgment are irreplaceable.
3. **Humans Overseeing Machines:** AI manages entire processes, but humans are still considered superior in decision-making. Lawyers oversee and intervene as necessary, ensuring the system doesn't make errors.
4. **Silicon Solicitors:** AI dominates the legal landscape, handling complete processes more effectively than humans. The role of humans shifts drastically, perhaps focusing on client relationships or ethical considerations.

Many people use a prompt like *“ChatGPT, show me some ways I might exercise to lose weight.”*

Compare that prompt to this one: *“Assume that you are an experienced and expert personal trainer with specialized training in low-impact exercises and exercise as part of a weight loss program. Also assume that I am a reasonably fit older adult male who exercises regularly. What would be a great low-impact workout regimen to help me lose weight? Create a recommended workout plan for the next thirty days that includes reasonable objectives.”*

Which prompt will give you the results that you want? I invite you to try them and compare the results.

BRINGING IT ALL TOGETHER

BRINGING IT ALL TOGETHER

THE POWER OF THE HYBRID

Human in the Loop

AI AS A SERVICE

Just-in-time, just-enough AI

LETTING HUMANS DO WHAT
THEY DO BEST

WHAT IS THAT?

Conclusions and Challenges

Amara's Law:

We tend to overestimate the effect of a technology in the short run and underestimate the effect in the long run

An “enabling technology”

“a technical breakthrough that takes a difficult task and suddenly makes it doable, easy; it opens the door to change, which then comes in an unconsidered, breathless rush.” - Ellen Ullman

HOMO FABER – Humans as tool makers

*The future is already here –
it's just unevenly distributed.*

- William Gibson

Action Steps

CENTER FOR LAW, TECHNOLOGY, & INNOVATION

Any conversation about programs in innovation or technology in law must include the Michigan State University College of Law and its Center for Law, Technology & Innovation.

Welcome to the Center for Law, Technology & Innovation at Michigan State University College of Law. For more than ten years, the Center has been at the forefront of integrating technology and innovation into the legal profession. The Center's vision is to democratize access to justice through innovation.

Our efforts have not gone unnoticed; in 2023, Bloomberg Law recognized the Center as a [leader in technology innovation in law school programs](#).

Our curriculum is designed to prepare "practice-ready" lawyers for the future, combining practical topics, skills training, simulations, and cutting-edge subjects. Our approach ensures our students are ready for the challenges and opportunities of the modern legal profession. Our graduates are highly sought-after by employers in the legal tech and innovation spaces, a testament to our effective approach to legal education.
